SIMILARITY: Belongs to the fabH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               [acyl-carrier protein].

PATHWAY: Fatty acid biosynthesis.

SUBUNIT: Homodimer (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

DOMAIN: The last Arg residue of the ACP-binding sit for the weak association between ACP/acpP and fabH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                initiates fatty acid synthesis and may therefore play a role in governing the total rate of fatty acid production. Possesses both acetoacetyl-ACP synthase and acetyl transacylase activities. Its substrate specificity determines the biosynthesis of branched-chain and/or straight-chain of fatty acids (By similarity).

CATALYTIC ACTIVITY: Acyl-lacyl-carrier protein] + malonyl-(acyl-carrier protein] = 3-oxoacyl-[acyl-carrier protein] + CO(2) +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Catalyzes the condensation reaction synthesis by the addition to an acyl acceptor malonyl-ACP. Catalyzes the first condensation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Res. 13:1800-1809(2003)
